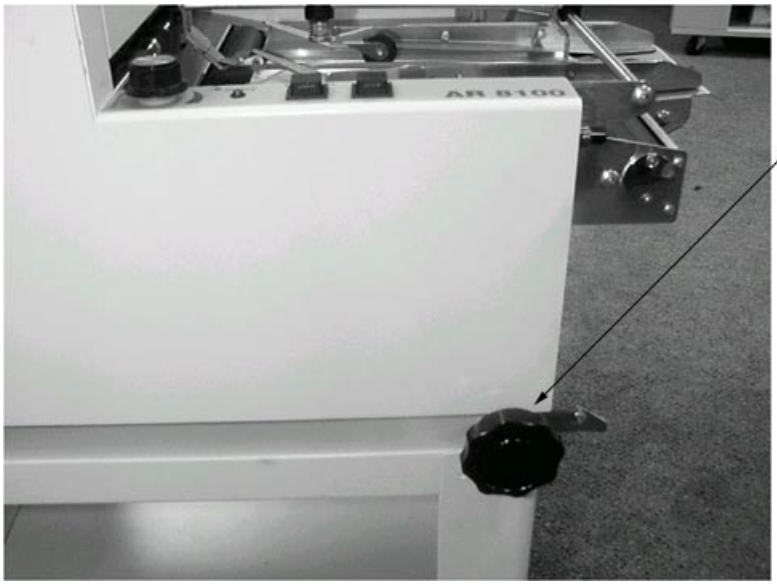
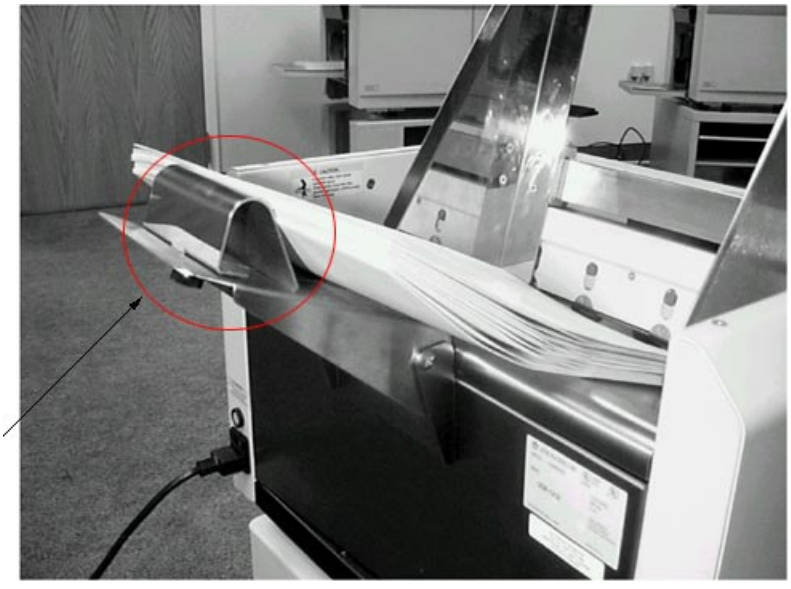
4. Side to Side Registration

Side to side (Horizontal Registration) is adjusted from the rotary dial at the front right base of the Feeder Unit. Rotating the dial clockwise brings the paper forward toward the operator, counter-clockwise brings the paper back toward the rear of the machine.



5. Adjusting the Back Support Guide


The Back Support Guide is designed to fan larger media (such as 10" X 13" envelopes) into the AR8100 feed position while reducing weight on the media stack. This ensures a positive feed of the envelope toward the AR8100 Transport Table. The Slide Plate should be positioned so that it elevates the media stack and fans the media toward the Feed Rollers of the AR8100.
